PREMIUM Toners

PPC has launched a range of premium, chemical toners primarily for use in high quality reproduction / graphics applications.

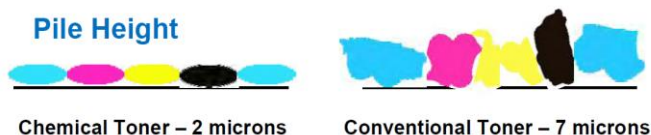

These toners are produced using an emulsion aggregation manufacturing method. As you can see from the close-up image below, this results in toner particles with very smooth edges.

The benefits of this to the end user are a wider colour gamut, and excellent fusing characteristics.

Better dot shape also contributes to providing smooth half tones and smooth, thin lines.

Another technical benefit is lower 'Pile Height'. This results in less energy needed to print and can help prolong hardware life.
